

# Design System Components

I created the following components during my design internship at Revvity Inc. under the supervision of senior designers, with the help of the UX research team.

This is the content below the accordion header. You can swap the component instance to change content types.

This is the content below the accordion header. You can swap the component instance to change content types.

This is the content below the accordion header. You can swap the component instance to change content types.

Label

...

▼

A vertical stack of five accordion components. Each component has a header bar with the text "Label" and a toggle icon (three dots and an arrow). The first and last components are collapsed, showing only the header. The three middle components are expanded, showing their respective content blocks. The content of the expanded components is: "This is the content below the accordion header. You can swap the component instance to change content types." repeated four times.

# Variable System

When Figma released their variable update in 2023, I spearheaded the implementation in our design system with best practices.

## Variable Naming Convention & Organization.
